TRIUMPH MK 3 STRAIGHT

Eight Times More Efficient

Double-edged 6-inch blades give you eight times the scraping width as compared to most ordinary scrapers. TRIUMPH MK3 STRAIGHT comes with the original and popular TRIUMPH carbon steel blade, but can also be used with TRIUMPH stainless steel blades. All blades are easy to change or rotate without use of a screwdriver or other tools.

Sharp

The sharp double edge blade is securely held in the handle's reinforced channel

Protected

Snap on the protective cover when the scraper is not in use. The cover is available with or without rubber squeegee

Color Signal

The red color signals: "Attention! Sharp blade." All JBF replacement blades are supplied in a safe dispenser with room for worn-out blades

Improved

The TRIUMPH MK 3 is an improved model of the well-known TRIUMPH MK 2

Secure

Anti-slip ribs provide a secure hold

TRIUMPH MK 3 ANGLED

Get the Right Angle

The TRIUMPH MK 3 ANGLED is the right tool for construction cleaning with an extension pole. You will be able to remove stickers, tape, paint, mud and other debris from hard to reach windows and glass. The 30° angled scraper is ergonomically designed to make hand scraping easier and is especially handy for removing solar film.

Smooth

New improved materials give a smoother working experience

Comfortable

Rounded corners make your grip secure and firm

Resistant

The soft-grip fits comfortable in your hand and is chemical resistant

Ergonomic

Handle is ergonomically shaped for the human hand

Angled

The 30° angle makes it easy to work with an extension pole

Flexible

Easily attach the handle to all kind of cones from different manufacturers

The Ultimate Cleaning Tool

A TRIUMPH scraper is one of the most important tools in a window cleaner's tool belt. It easily removes paint, tape, stickers and construction debris like stucco or caulk.

All TRIUMPH scrapers are carefully designed to secure and hold the blade perfectly straight. Our scrapers are available in blade-lengths up to 6 inches, so large areas of glass can be cleaned with less motion.

Carbon or Stainless Steel?

A good blade is a precision made, ultra-sharp and very thin piece of metal. The blades are commonly available in stainless steel or carbon steel. Carbon steel is preferred for heavy usage because it's thicker and slightly stronger.

Carbon steel blades are mostly good for one day's usage because the blades rust quickly. Stainless steel blades are more flexible and far more resistant to rust, but are not quite as sharp.

So we recommend stainless steel blades if you only scrape occasionally.

TRIUMPH offers straight, angled and heavy-duty handles as well as a handle with a special closing mechanism for quick opening and closing. All JBF replacement scraper blades can be changed or rotated without use of a screwdriver or other tools.

How to Scrape?

- Only scrape on wet glass. Adding soap helps even more
- Only push a scraper. Never pull it back
- Apply even pressure holding the blade flat against the glass
- Approach edges slowly to avoid cutting caulk or damaging frames
- Never scrape windows with film tint applied. The scraper will cut it and even lift it off the glass

For replacing of blades please refer to www.jbf.dk.

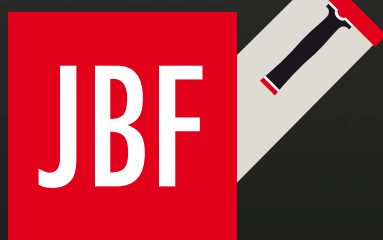

A TRIUMPH scraper is a must when windows need a heavier cleaning than soap, water and a washer sleeve can provide.
